Art Unit: 1652

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1-5, drawn to a method for rapid and efficient purification of proteasome, classified in class 530, subclass 412.
- II. Claim 6-12, drawn to a DNA construct and method for assessing the proliferative potential of malignant cells, classified in class 435, subclass 6.
- III. Claim 13-15, drawn to a DNA construct encoding a thermostable fusion protein, classified in class 530, subclass 23.4.
- IV. Claim 16 -18, drawn to a DNA construct encoding a fusion protein for selecting for drug resistance in mammalian cells, classified in class 435, subclass 7.23.

Inventions are different from each other for the following reasons.

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are two unrelated methods having different steps and effects. The methods are not disclosed as capable of use together.

Inventions I and III-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions, the methods of purification of proteasome is unrelated to a DNA construct encoding a thermostable protein or protein used in

selecting for drug resistance. The inventions are not disclosed as capable of use together.

Inventions II and III-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the DNA construct and the method of assessing the proliferative potential of malignant cells are not disclosed as capable of working together with DNA constructs encoding a thermostable fusion protein or protein used in selecting for drug resistance.

Inventions III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the DNA encoding a thermostable fusion protein and DNA construct encoding a protein used in selecting for drug resistance are different chemical entities.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1652

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C. F. R. paragraph 1.48 (b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filled petition under 37 C.F.R. paragraph 1.48 (b) and by the fee required under CFR paragraph 1.17(h).
